

## **Powertech IST Data provide Enviroserv with Maximo for Transportation asset maintenance management solution**

*Recognising that their manual fleet maintenance record keeping system no longer met the requirements of an ever-increasing fleet of trucks, waste management company, Enviroserv, have enhanced the functionality of their system by incorporating the Maximo for Transportation solution provided by Powertech IST Data.*

The day-to-day maintenance records of Enviroserv's fleet of two hundred trucks, one hundred light duty vehicles and one hundred and fifty trailers (as well as ancillary equipment), which were previously administered on a manual basis, are now being recorded and managed electronically via a new system which offers a range of value-added functionalities, including licensing and leasing administration, repair history and costing compilation, maintenance scheduling and work order generation.

"The previous system had definite shortcomings," says Ryan van Heerden, national logistics systems manager at Enviroserv, "and we have, since introducing the Maximo system, seen a marked improvement in the way in which we are able to monitor the service requirements of our fleet."

Effectively managed servicing activities enable companies to engage in preventative maintenance and thereby prolong the operation of if their machinery. Manual approaches to asset maintenance, although a better option than having no system in place, are limited in their comprehensiveness. The Maximo for Transportation software system involves the twice-daily bulk import of each truck's mileage reading, with the then automatic generation of maintenance and scheduling advisements.

“We are excited about the opportunity to provide Enviroserv with the technology necessary to effectively maintain their waste transportation and disposal fleet,” says Danie Rossouw, senior Maximo consultant at Powertech IST Data. “In addition to a host of associated benefits, the software also offers inventory management and asset depreciation monitoring functions, so has the potential to provide any business with invaluable asset maintenance capabilities.”
